### **DETAILED ACTION**

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 30,35 and 36 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Claims 30, 35 and 36 are clearly directed to a calculation of a parallel efficiency of a parallel computer system according to a mathematical algorithm. Claims 30 and 36, although written in apparatus and computer storage medium, they are not drawn to any specific structure for the claimed invention. The first, second, third and fourth calculators as recited in the claims are rather calculating functions than separate hardware components of the claimed invention. The claims clearly cover every and any device implementing the mathematical algorithm, and thus preempt any and every device to performs the calculation. Therefore, the invention of claims 30,35 and 36 are non-statutory subject matter as being a directed to preemption of a mathematical algorithm. The recitation of outputting the calculated parallel efficiency to a display device or a display device displaying the calculated parallel efficiency is a mere “insignificant post-solution activity” which was held to be insufficient to render invention statutory (see *In re Bilski*).
